ABOUT US

CIVIC started in the early 80's by Danie van der Nest. Coming from Telkom copper line background, Danie saw the potential in the years to come.
Danie van der Nest started CIVIC DATA SERVICES and became a mainstream supplier to some of the biggest corporate companies in South Africa. Supplying all networking solutions for these massive infrastructures. As the years moved on, technology has changed and Civic wanted to keep up with the new trend as they were coming along.

In 1996 Danie van der Nest and his partners decided to take on a new challenge and with a blink of on eye Civic Automation Services(CAS) was born. Taking on the small and the big, CAS set forward in creating a comfortable and luxurious environment for all their clients. These ranging from Sandton Convection Center, Coca Cola dome to even small residential houses. Automating their lights, audio visual and security features.

In 2010 Eugene van der Nest, Danie's oldest son, joined the company. Coming out of school, he came in with his own mindset and ideas. Starting as a programmer and installer, within CAS he expanded the range of services CAS can provide as the years moved on. Danie gave the reins over to Eugene as Managing Director in 2017. In this time Eugene's brother also joined the company in 2015. Clinton being very "tech savvy" and understand what technology is about. Clinton is more hands on, growing up in a world where technology and cellphones was the new way of doing things.

In 2019 Clinton and Eugene were both appointed as directors and share holders of Civic Automation Services.

Eugene saw a gap in the market in 2017 with electricity need within SA, and like his dad, with a blink of an eye, CIVIC SMART SYSTEMS(CSS) started providing power to the nation. Being up to speed with the latest technology and having the huge technology background, they can provide a tailor made modular system to each of there clients, serving the whole of SA. CSS is currently generating over 15 Megawatt at this stage and adding about 100kw to this number every week.

To expand the reach of solar energy solutions in the region, CIVIC established a branch in Gaborone, Botswana, dedicated to serving commercial and industrial clients.

David Keyser, a long time friend and employee of Clinton & Eugene got the opportunity to join the company in 2024 as director and share holder. Bringing his own technical expertise and client relationship skills to the company.

Clinton, Eugene and David have never backed down from a challenge and will strive their upmost best with their support staff to provide a great and functional system for all their clients.

In 2024, Michelle Gebrial, a respected Botswana national and accomplished businesswomen, joined as a director and shareholder. As a result, a Botswana branch was launched, focusing on solar energy solutions to address rising energy cost, ongoing power supply challenges , and the drive toward a sustainable green energy industry.

We live by:
*dedication
*attention to detail
*excellence

"HELPING YOUR HOME HELP YOU"

WHERE DO WE FIT IN...

We found a solution where you will never forget a light on or a door unlocked. Why not add convenience, luxury, and state of the art technology, transforming the decades-old home automation set-up into a new and efficient automated system?

Going green or just trying to save on you electricity bill. CIVIC can provide you with a solar energy system. Load shedding a big problem? With CIVIC Hybrid, Grid Tie & Battery Back up systems we got you sorted.

OUR VISION

Becoming a key player in the SA & Botswana HOME AUTOMATION & SOLAR market! Continuously striving towards enriching our smart home portfolio regularly with new products. Users can constantly enhance their smart home experience and improve their home management and productivity.

We see ourselves being present owing to the ease of use of our products, easy installation, after-sales services and the fact that our products are 2-3 times more economically viable than the current products in the market.

FEATURES

With a single app on your smartphone, enjoy utmost control of your devices on the go or at your home, no matter where you are around the world. All you need is a internet connection!

It offers customized scenes and routines providing flexibility to remotely control your smart environment. Easily let your family members access the app by adding multiple devices and plan routines based on temperature, location and time settings of every individual.

Voice control via Amazon Echo and Google Assistant

Interworking of multiple smart devices. Devices automatically start/stop working based on temperature, location and time.

Remotely control appliances and lights from anywhere

Add and control multiple devices at once with one App

Receive real-time alerts to ensure safety

AUDIO & VISUAL

Simplify your digital lifestyle with easy to control high quality Audio/Video in one room or your whole home

Control4 entertainment solutions create the ultimate audio/video experience—in one room or every room, no matter the size of your home. Experience the latest 4K movies stream high-resolution music, enjoy unlimited entertainment, or create an unbeatable home theater experience.

Technology disappears and you simply interact with your favorite movies and music from an easy-to-use, intuitive Control4 interface, such as a hand-held remote, tabletop touch screen, the phone in your pocket, or with the simplest interaction method of all—your voice.

COMFORT

Simply control your whole home from one device.

The completely redesigned interface will ensure the right level of comfort for any home and provide powerful flexibility that will maximize energy efficiency. All-new presets provide personalized comfort settings that can be recalled on a schedule or with a couple of taps on a touch screen or in the Control4 App. Imagine, a climate control system that responds to the dynamic changes of daily life, instead of being bound to a rigid time-based schedule.
Now you can use this beautiful new comfort experience with common household systems and popular brands throughout the world, including radiant flooring, forced air, dual fuel and geothermal systems provided by your favorite brands.

SECURITY

Taking back control of your advanced security system

Your security system will integrate into home automation. When your system is armed and a intruder is detected, a scene will automatically trigger on your system.

Example turning on lights in certain areas and turning on your TV with selected camera view.

LIGHTING

Making your home feel like home again...

Brighten or dim any light in the room - or the entire house - with a single touch. Automate lighting to respond to your life, without any touch at all. The house can even appear occupied when no ons is home. It's not just smart, it brilliant.

SOLAR

WHY...?

CIVIC is a one-stop solution for residential, commercial and industrial facilities, seeking to save on electricity costs and rising energy prices. Solar solutions generate additional revenues from renewable energy and reduces the impact on the environment creating a better and safer world.

HYBRID

LOAD SHEDDING WON'T EFFECT YOU AGAIN.

HYBRID SYSTEMS Operating totally off the grid requires a large capacity battery array capable of powering the property during periods of low irradiance in winter and an inverter capable of supplying the maximum load ever required at one time.

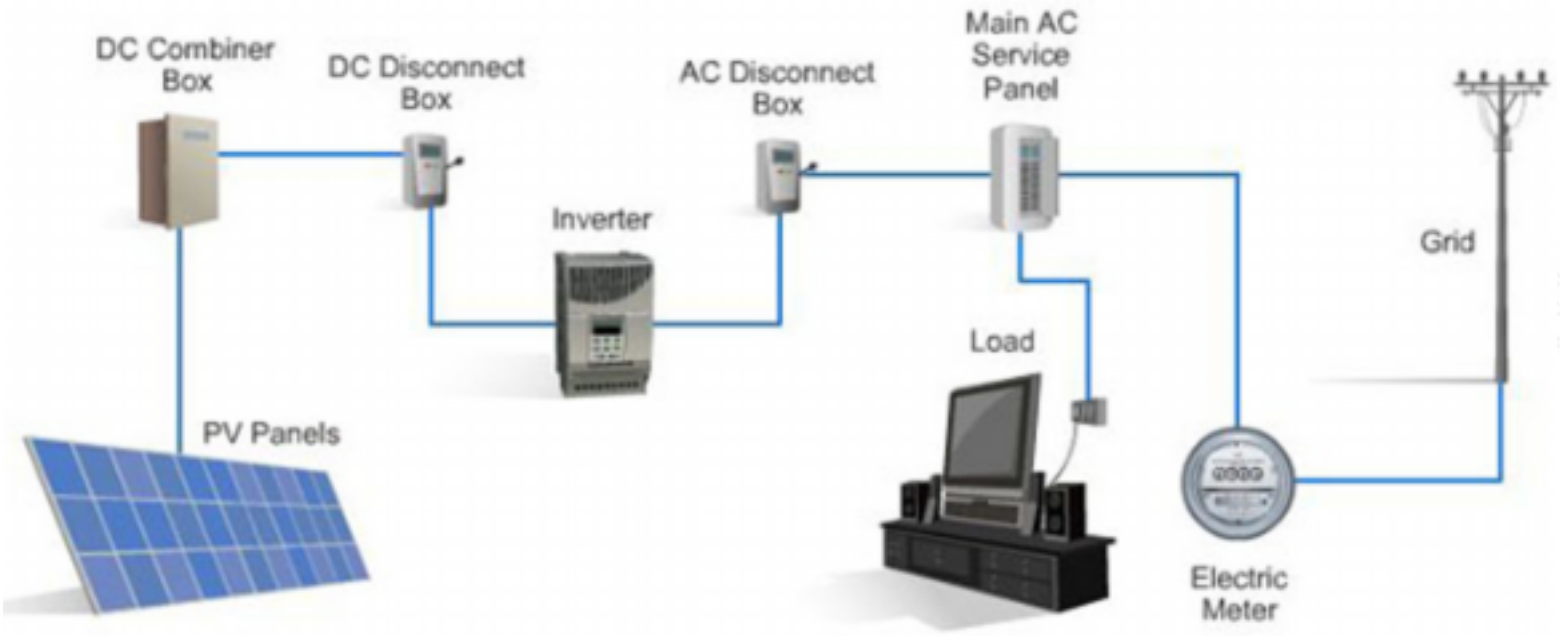

This requires a significant investment in PV modules, inverters and especially batteries which cannot normally be justified if there is a good quality grid connection available at the property. An off-grid system is well suited to rural areas with little or no grid connection but is unlikely to be a viable solution in a well-connected urban area. Should however fixed connection charges for electricity become more common and higher then disconnecting from the grid may become a more viable option in the future.

GRID TIE

DO YOU USE A LOT OF ENERGY..?

A pure grid-tied system with no storage or load management for a user with fixed rate power charges is a viable option for South Africa but the system will need to be significantly under sized to minimize the wasted energy generation as typically no surplus power can be exported. Essentially the PV system has to be sized to generate only sufficient power for the base load during the day, i.e. the fridge, freezer, pool pump and other permanently on devices. The low investment cost of a small PV system with a high self-consumption rate should make them quite attractive especially for households with family at home during the day.

BATTERY BACKUP

STORE YOUR ELECTRICITY

If frequent load shedding continues each winter then there will be continued demand for grid-backup systems that can operate with no grid for prolonged periods of time. Adding a battery inverter or a hybrid inverter along with a battery makes it possible to combine the energy from the PV system with that from the stored battery to power at least the essential loads in the property. The size of the battery required depends on the rating of the essential loads to be driven from it at times of no solar power being available.

SOME REFERENCES

"...We engaged CIVIC to assist us with the design, installation, and monitoring of solar infrastructure that would support sustainable energy management within our company. Throughout the process, they demonstrated professionalism, technical expertise, and a deep understanding of both solar technology and the broader goals of energy efficiency..."
- Golden Circle metals -

"...They are very professional and reliant. We had numerous issues after a huge lighting storm and they drove through in the middle of the night to assist. We had a few issues thereafter, but it was sorted out in a short period of time. They are always just a phone call away and goes the extra mile..."
- Lavender Hills -

CIVIC has been a reliable partner, contributing to our organisation and the community with innovative solutions and excellent service. I confidently recommend them for future solar projects.
- Vrystaat Pretoleum-

The team at Civic Smart Systems expertise and product knowledge ensured the project was completed efficiently, and our system has now been running smoothly for a year and a half without any hassles or issues. Imiel continues to provide support and is always available to assist us where necessary.
